

May Newsletter

This is our first newsletter which we hope to publish quarterly to keep you up to date with what we are up to.

Special pricing for uSee Sites this month

Harrington Systems are pleased to announce special pricing for any customers that chooses to purchase 5 or more uSee cameras this month. If you purchase 5 cameras, we will give you the sixth site free. If you would like more information regarding this special offer, please contact us.

Free Pipe Reader update available

We have been busy working hard on a software update for the Pipe Reader. We have just released an update that has improved several things including more flexibility with entering unusual PIC numbers, Bluetooth connectivity and sending files to the database automatically. To get the update, go <http://www.harringtonsystems.com.au/software-updates/>

uSee Satellite almost ready

The satellite uSee remote monitoring camera is almost up and running. It has been a long development process, but we are almost there. We expect to be able to start delivering the sites in the next few months. The uSee Satellite cameras will be able to work anywhere in Australia and will be simple to set up and easy to install. Please give us a call if you would like more information.

Bore drains?

Did you know that it is possible for anyone who is considering completing a GABSI (Great Artesian Basin Sustainability Initiative) scheme to receive a subsidy for uSee cameras to monitor troughs. If you would like any more information, please contact us.

Lightning strike near Longreach at end of 2009 captured by uSee

uSee Update Offer for existing customers

To experience improved reliability and features of our newest type of camera, old sites with a mobile phone inside can be upgraded at cost which is \$330. Let us know if you would like to upgrade your site/s as you will also have to send back the solar panel and antenna to be upgraded.

What else are we working on?

We have been busy here at Harrington Systems developing new products. We have developed a weather station and tank level for our uSee cameras, and have also developed a low cost GPS tracking system based on the uSee system

We are also currently working on a Walk on weighing system that will let us monitor the condition of cattle from the uSee website. We have set one up in our cattle yards with a few head and are already getting some really good results.

We can also make timers and numbers/scoreboards for campdrafts, rodeos and sporting events etc. Sizes vary from fit in your hand up to a timer with digits 2 feet high.

We are always looking for new opportunities and if you have any ideas or suggestions, please let us know.
